

## Moiré and the Dog

David Bediz

2nd place, natural category, 1996

Although this isn't a high-speed photograph, it does show an interesting optical phenomenon. Light glaring from the seat of the chair passes through the two layers of webbing that cover the chair's back. Small differences in the spacing of the strands in the two layers produce the Moiré effect.

David Bediz is the only NCSSM student to win awards in the AAPT Photo Contest in successive years and also to win awards for two photos in the same year. In 1996, he also won 1st place in the contrived category.
